1955-2000: LUXEMBOURG

Population risk of dying at ages 0-34

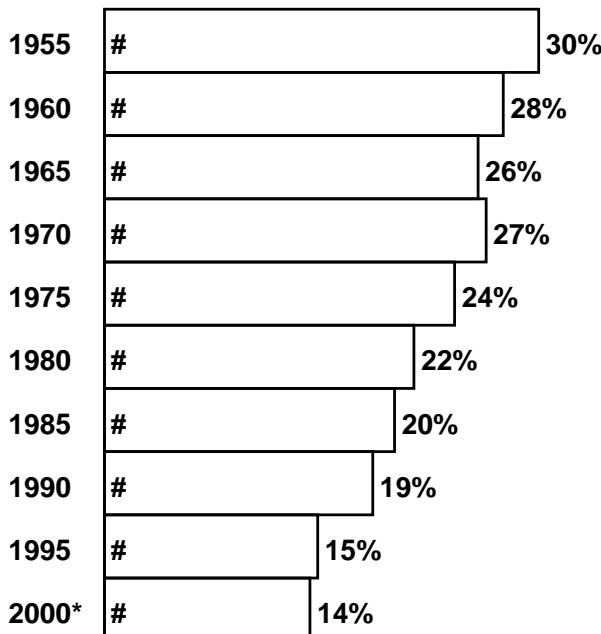

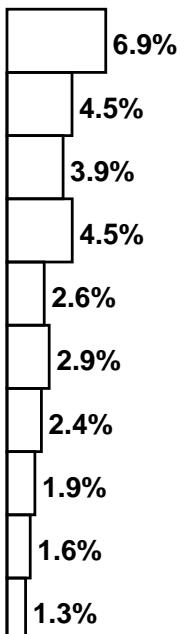

Population risk of a 35-year-old dying at ages 35-69 from smoking (shaded) or from any cause (shaded and white)

*eg, at year 2000 male death rates, out of 100 men aged 35, 27 would die before age 70 (with 9 of these deaths attributed to smoking)

MALE

Note: Most of those killed by smoking would otherwise have survived beyond age 70, but a minority (shaded area to right of dotted line) would have died by 70 anyway

FEMALE

Real risk too low to estimate reliably

LUXEMBOURG: 1950-2000**Numbers of deaths attributed to smoking / total deaths**
